

Aplanotonometru pentru biomicroscop tip Haag Streit, asigura precizie în masurarea presiunii intraoculare (IOP). Aplanotonometre pentru biomicroscopie tip R (YZ-30R) sau tip T (YZ-30T), design compatibil cu biomicroscopie Haag Streit. Aplanotonometrul permite medicului oftalmolog evaluarea detaliata si fiabila a tonusului ocular. Esential pentru monitorizarea si diagnosticul tulburarilor oculare in spitale, clinici medicale oftalmologice si cabinete oftalmologie moderne.

Applanation Tonometer

Applied classic Goldmann principle
Provide fast and accurate IOP measurement

YZ-30R

Accurate Measurement

With years of tests and clinical applications, Goldmann has been proved to be the the gold standard for tonometry measurement. Based on the proven evidence, MediWorks T170 tonometer applied Goldmann principle in the design and manufacture.

With precision manufacturing process, MediWorks applanation tonometer offers accurate and consistent measurements which give a clear picture of patients' IOP situation to the doctors.

Excellent Mechanics

Full attentions are paid to every detail in the manufacture of tonometers. Workers assemble every component carefully and check tight tolerances in weight to make sure the tonometer deliver consistent measurements.
